Omnichannel Fashion Hub and Creations

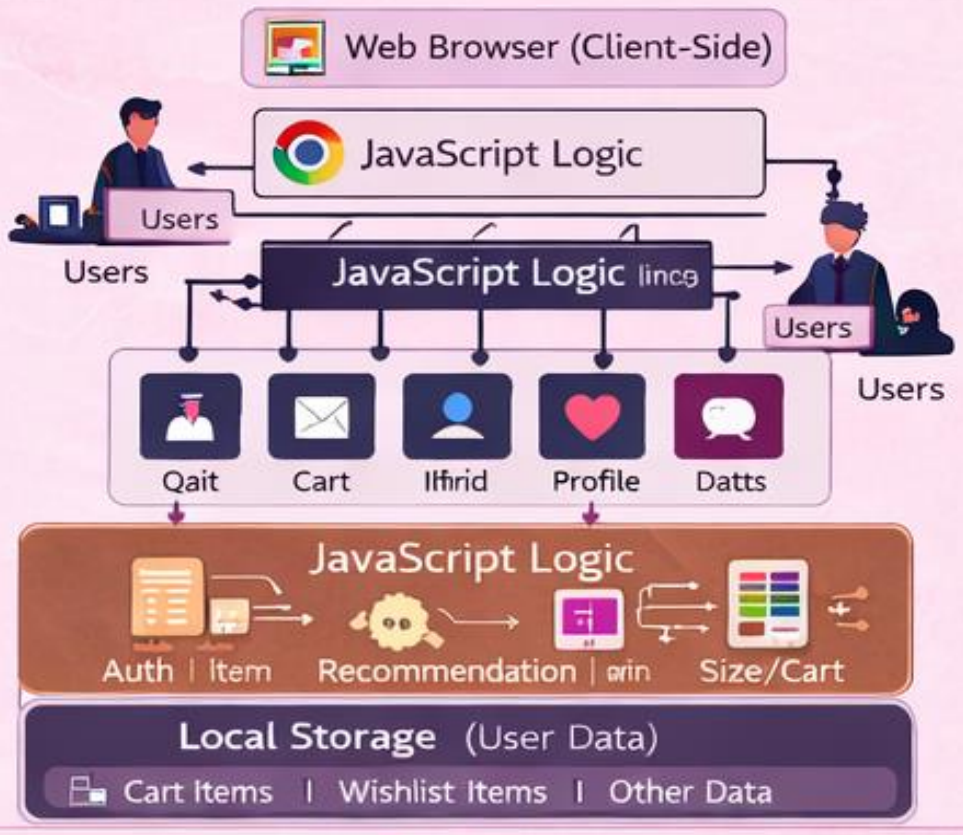
Project Based Learning – FWD

ABSTRACT

The **Omnichannel Fashion Hub** and **Creations** is a web-based platform designed to provide users with a seamless fashion browsing and customization experience. Users can explore trending fashion collections, view bridal designs, and receive outfit suggestions using an AI stylist feature.

The **system** is developed using **HTML, CSS,** and **JavaScript** to create a responsive and interactive interface. It allows users to browse designs, select sizes using the **Custom Fit** feature, and manage fashion orders efficiently.

SYSTEM ARCHITECTURE



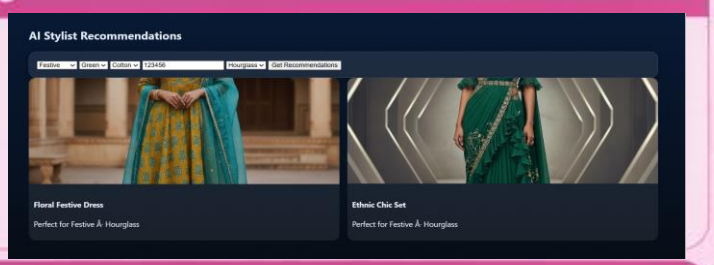
CO-WISE IMPLEMENTATION

CO1 – Internet Fundamentals, HTML & CSS

- Responsive website layout
- Semantic HTML structure
- Navigation bar and hero section design
- CSS styling and UI components

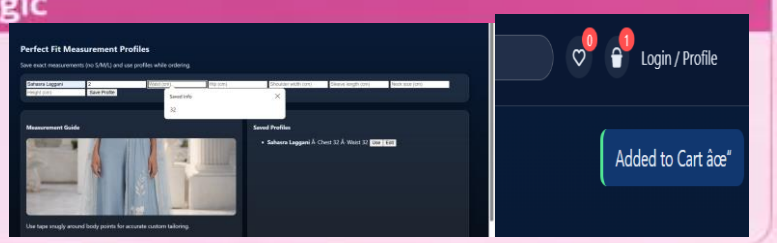
CO2 – JavaScript Programming Essentials

- Dynamic fashion recommendation
- AI stylist recommendation logic
- JavaScript design implementation



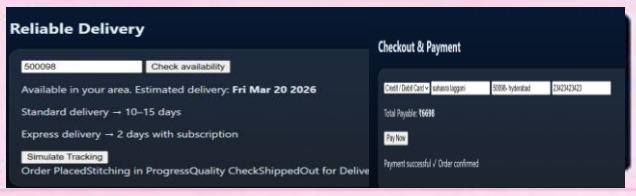
CO3 – Data Handling & Algorithmic Logic

- Custom fit measurement logic
- Product sizing logic
- Cart management modification



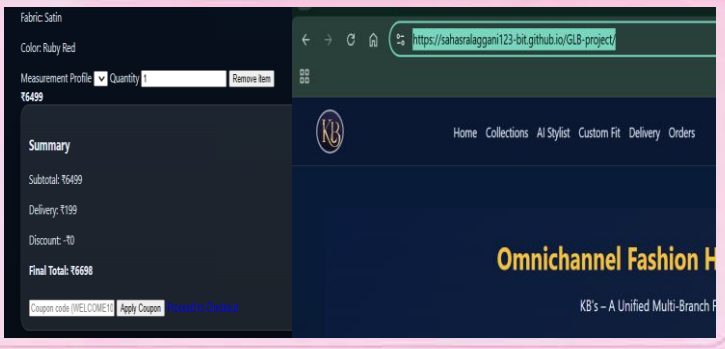
CO4 – Data Management & Deployment

- Order processing flow
- Delivery tracking and order management



CO5 – Advanced Web Development & Deployment

- JavaScript exception handling
- Form validation and dynamic user input handling
- API data handling
- Project deployment using GitHub Pages



FEATURES OF THE SYSTEM

- AI stylist fashion recommender
- Trending fashion collection exploration
- Custom fit feature for size customization
- Cart management and order management

TECHNOLOGIES USED

CONCLUSION & FUTURE SCOPE

The Omnichannel Fashion Hub and **Creations** platform – recommended will include travel improvements and trave suggestion feature expansions and future suggestions. Future improvements may include expanding the product range, enhancing the AI stylist feature, and incorporating machine learning for personalized recommendations.
